Unfinished

2 / 4 = 50.0%

Different populations answer different questions

All parcels due

50.0%

Includes unfinished

Completed deliveries

66.7%

Excludes unfinished

Checks pass. Is the publication ready?

Identifiers

4 rows · 4 distinct identifiers

Times

4 promises · 1 allowed empty completion

What the checks support for this input

Identifiers

Uniqueness

Required values

Completeness

Accuracy and timeliness need evidence

Not established

Accurate timestamps

Delivery by the contract deadline

These checks leave three questions open

Definition

Does the code use the all-due rule?

Publication

Which output was published?

Report read

Did the report read that output?

A contract records the commitment

Evidence tests it

Check results and delivery records

The engineer still needs to verify readiness

Chosen rule

All due

Verify result

50.0%

Attach evidence

Output + read

The decision remains pending

Missing publication

No verified all-due output attached

Next owner: reporting engineer

Compare the quality rule and observation

Expected duplicate count

0

Rule requirement

Observed distinct IDs

4

Observed input result

Find the gap and next action

Chosen rule

All parcels due

Missing evidence

Verified all-due publication
