Does an access label prove control?

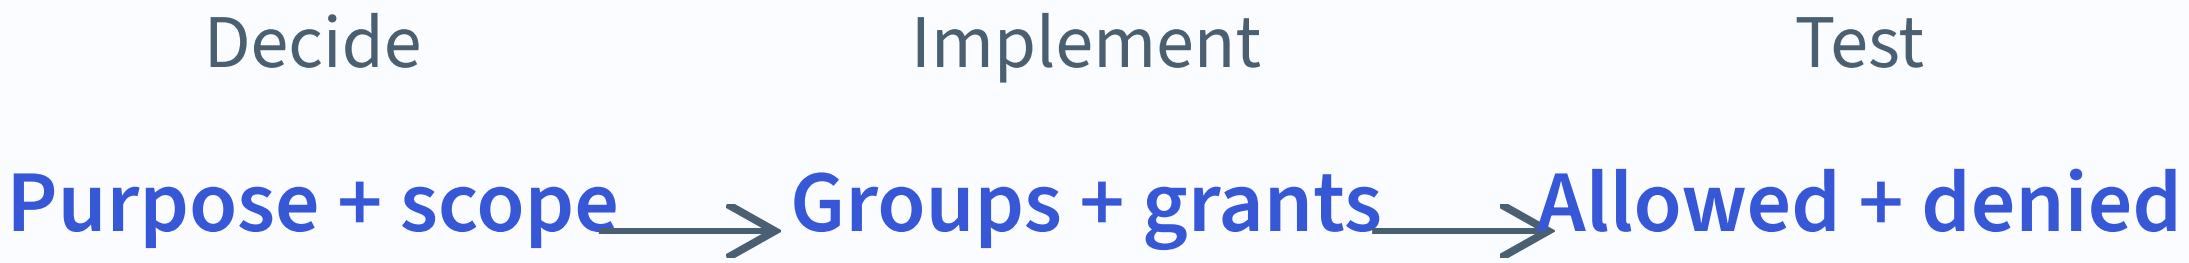

Recorded classification

Restricted operational data

Recorded purpose

Approved analysts investigate performance

Connect approval to controls and tests

Test permitted and restricted accounts

Database · Search · APIs · Exports

Check every supported retrieval path.

Approval is limited to its recorded purpose

Purpose needs a decision

Team membership is not blanket approval.

Revocation does not retrieve copies

A downloaded copy remains

Revoking a grant cannot retrieve it.

Which dataset and status does this cover?

Operational dataset

deliveries

Restricted investigation

Separate research plan

Synthetic v1.0

Proposed CC BY 4.0

Pending ID; no release

A separate dataset needs its own permission

Synthetic ≠ operational

Invented parcels

Operational export not authorised

FAIR supports reuse, not permission

F	A	I	R
Findable	**Accessible**	**Interoperable**	**Reusable**

FAIR does not require public access.

Check actual publication status

Planned ≠ deposited

Proposed license + pending identifier

Do not establish a completed deposit.

Protect the evidence itself

Potentially revealing material

Saved queries + samples

Copies and discovery paths

Check indexes and exported copies

Agree retention by artifact and purpose

Include the copies

Different artifacts can need different periods.

Identification does not restore the input

Metadata may explain

Which input

The reference can remain

An exact rerun

Needs data

Metadata cannot restore rows

Keep the limits of deletion evidence visible

Deletion audit ≠ all copies gone

Unmanaged copies need separate evidence.

Compare approval and enforcement

Access decision: Example record

Which purpose was approved?

Evidence of controls

Which implementation and tests exist?

Compare dataset identity and status

Research dataset
