Recorded drop or complete scan
able and expected to see the table.

One scheduler event. A first receipt.

E20 reports publication

10:00

R1000 → summary-R1000

First receipt

10:01

Same source + event ID

One reported publication received twice

Scheduler event	First receipt	Repeated receipt
E20	**10:01**	**10:04**

Deduplicate by source and stable event ID.

The last receipt belongs to an earlier run

E19: R0950 failed

09:50

Received 10:06 UTC

E20: R1000 published

10:00

Received 10:01 UTC

The last receipt belongs to an earlier run

E19: R0950 failed

09:50

Received 10:06 UTC

E20: R1000 published

10:00

Received 10:01 UTC

Keep E19 with R0950, not R1000.

Which version does the table contain?

Scheduler E20

summary-R1000

Reported at 10:00 UTC

Database scan S7

summary-R0940

Observed at 10:03 UTC

Current published version: disputed

Scheduler E20

summary-R1000

Reported at 10:00 UTC

Database scan S7

summary-R0940

Observed at 10:03 UTC

Keep both claims, sources and times.

Attach the evidence behind a conclusion

Investigate

Write logs + saved output versions

If resolved

Record the supporting evidence

These conclusions can coexist

One reported publication

Earlier run failure

Disputed current state

Arrival order does not settle a disagreement.

What would a later omission establish?

Map example: 20 October

Compare observed and collected times

Hypothetical later scan

Check scope, permission and outcome

Try it on the page

Deduplicate. Order. Investigate.

Different checks answer different questions.
