The operations meeting

# Which deliveries count?

Of all parcels due by noon, how many arrived on time?

Four parcels due by noon

Observed at 13:00

**On time**

**On time**

**Late**

**Unfinished**

Which parcels belong?

$$2 / ? = ?$$

Choose the population before calculating.

The evidence

# Four parcels. All due.

At 13:00: two on time, one late, one unfinished.

Four parcels due by noon

Observed at 13:00

**On time**

**On time**

**Late**

**Unfinished**

Which parcels belong?

**2 / ? = ?**

The records are complete at this moment.

Worked example

# Count completed deliveries

Keep the late arrival. Leave the unfinished parcel outside.

Four parcels due by noon

Observed at 13:00

On time

On time

Late

Unfinished

3 completed deliveries

2 / 3 = **66.7%**

2 on time out of 3 completed.

Your turn

# Count all deliveries due

Which parcels belong in the denominator? Pause and explain.

Four parcels due by noon

Observed at 13:00

**On time**

**On time**

**Late**

**Unfinished**

**Which parcels belong?**

$$2 / ? = ?$$

The numerator is still two. What changes?

The operations answer

# The unfinished parcel counts

All four were due by noon. The numerator stays the same.

Four parcels due by noon

Observed at 13:00

**On time**

**On time**

**Late**

**Unfinished**

4 deliveries due

**2 / 4 = 50.0%**

2 on time out of all 4 due.

A separate example

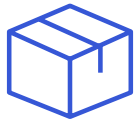

# Six parcels. Your calculation.

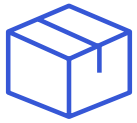

All six were due. Assume complete records at measurement time.

Six parcels due by noon — Observed at 13:00

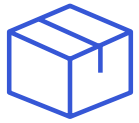

**On time**

**On time**

**Late**

**Late**

**Unfinished**

**Unfinished**

Which parcels belong?

$2 / ? = ?$

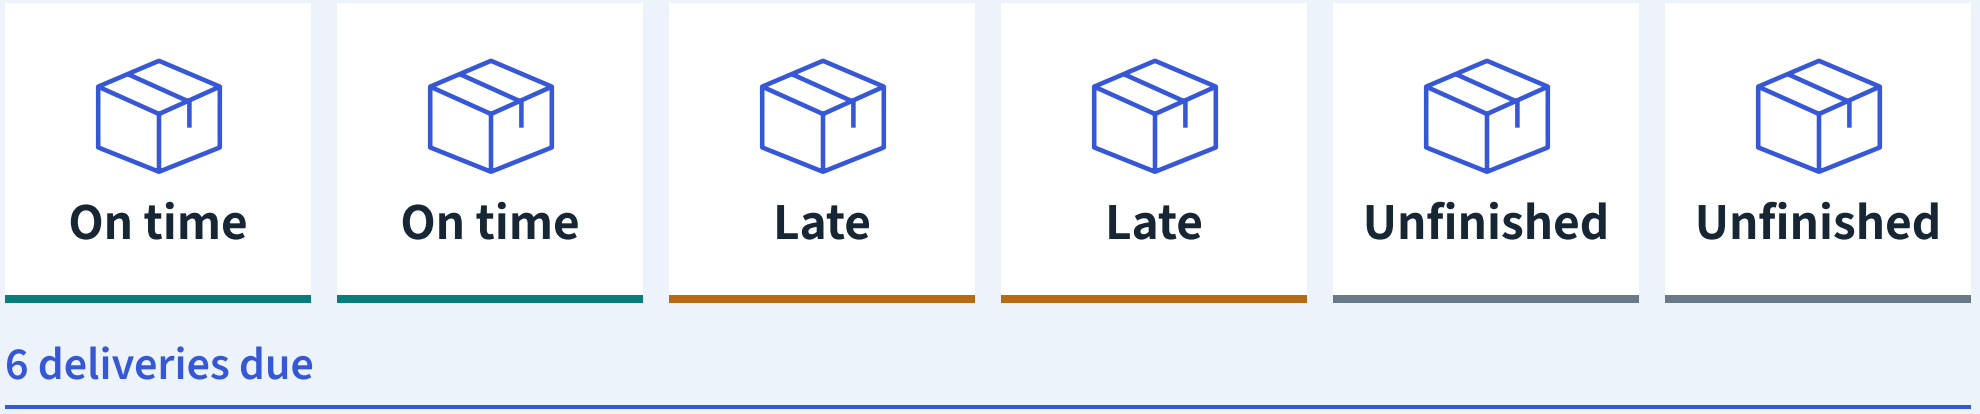

What percentage of all parcels due arrived on time?

Check your reasoning

# Two out of all six due

The unfinished parcels still belong in this population.

Six parcels due by noon — Observed at 13:00

**2 / 6 = 33.3%**

Using 4 as the denominator would answer a different question.

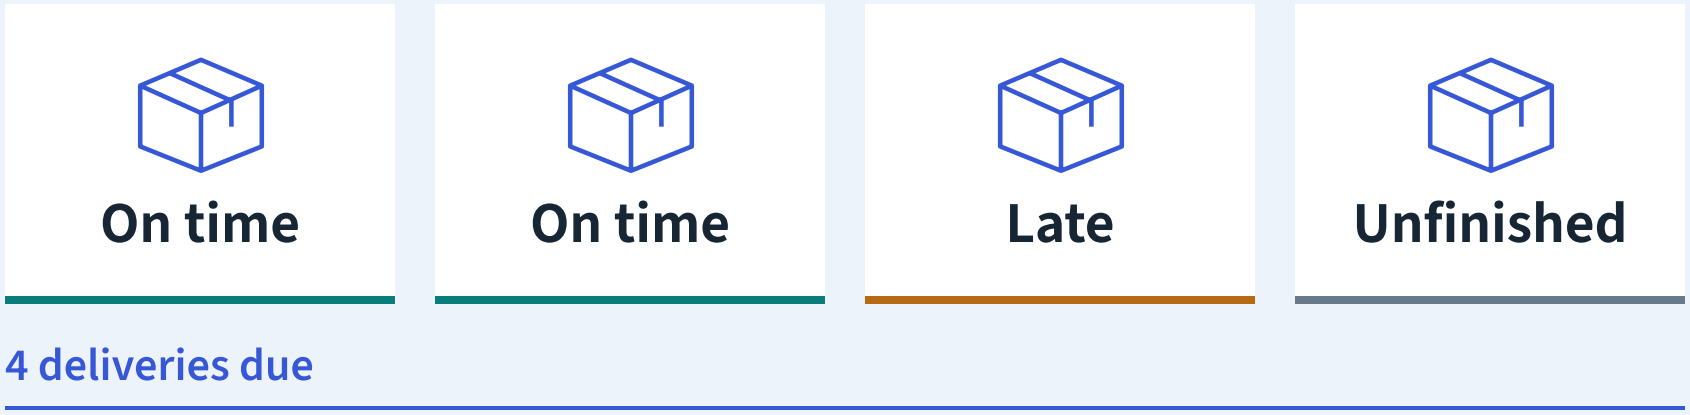

Use the definition

# Make the rule inspectable

Population. Measurement time. Responsible team.

Four parcels due by noon

Observed at 13:00

**2 / 4 = 50.0%**

Then check that the calculation follows the recorded rule.
