A collector is installed. Enough evidence?

Two pilot questions

Choose measure + explain older 100%

Database collector supplies

Table and view structure

Trace the incident to retained evidence

Refresh		Output		Run		Retained
Output ID	→	**Run ID**	→	**References**	→	**Input + code**

Test the investigation, not just the links

Open the evidence

Can an independent reviewer inspect it?

What decision follows from this pilot?

Evidence tests

Both pilot questions answered

Access checks

Tested accounts and paths pass

What decision follows from this pilot?

Weekly maintenance

90 min observed

120 min limit

Updates: same day · limit: 1 working day

Keep reviewed documents + SQLite

Two pilot questions

Invented assessment

No catalogue product evaluated

Trial trigger: exceed an agreed limit

Weekly maintenance

More than 2 hours

Update delay

Longer than 1 working day

Operating work needs explicit owners

Reporting engineer

Collection failures + observation age

Relevant business team

Responsibility for its definition

Protect metadata across interfaces

Search · Links · Exports · APIs

Repeat checks when permissions change.

Retest after a collector upgrade

Identity and structure

Identifiers + fields

Investigation

Evidence links still work

What does this collection run supply?

Structural evidence

Supported

Name one observed fact

Incident evidence

Missing

Name one missing kind

Collection and definition have different owners

Collection maintenance

Reporting engineer

Definition responsibility

Relevant business team
